

NEW NATURALS, UNORTHODOXIES AND NON-POLLUTIONS,

v. 2.

-NEW HEXAPODS:-

Parts of a monograph of Australian Chalcidoidea.
Synopses only. BY A. A. GIRAULT.

1. *Stilbula toga*. From *octodigitata*: petiole concolorous; femora red-brown; scutellum with an emarginate plate (apex); distal joint of 12-jointed antennae much longer than wide, with a conspicuous spicule; scope twice longer than wide; mouth-plate 10-digitate. Ringwood, Victoria
2. *Reptrocercopseus 4-dentatus*. From *albicornis*: funicle 1 distinctly wider than long, smallest; postmarginal vein nearly twice the stigmal; propodeon longer; jaws long, obtuse-toothed. Inkerman Mountain, jungle, Dec. 9.
3. *Epistenia devannyi*. From *nigriaenea*: abdomen 2 glabrous, stigmal vein straight. Nelson. To a Bohemian Havlicek-like fighter for liberty. *E. inusitata*. From *corticis*: Legs aeneus except tarsi, median ocellus somewhat closer lateral carina (face). Kuranda, Nov.
5. *Theumasura goethei*. From *juno*: Hind coxa, distal two-thirds femur 3, aeneus; tibial spurs short, equal, of moderate length; funicles 3-5 red; loop (wing) incomplete; tibia 3 with four stout spines above. Chinchilla, A.P.Dodd.
6. *Epibootania guttatipennis*. (Genotype, jaws bidentate). From the following besides: scutellum after suture glabrous; stigma longer than wide; only base of abdomen (of that part) aeneus, the scutum, scutellum, meson of pronotum green. Kuranda, A.P.DODD. *Epi. nympha*. Same but red-yellow the thorax with much black, abdomen with three black cross-bands, pronotum green save lateral margin. Mt. Tambourine from Microcitrus, S.E.Flanders. Wings with fuscous marks.
8. *Propleurotropis mini*. (Genotype Entedoninae. Median car-

inn of the propodeon simple, postmarginal vein elongate, so the tibial spur.) green, wings clear; scape, legs (-- above coxae) white, so tibial spur, it exceeding metatarsus, curved, black at tip, stout. First funicle twice longer than wide, 2-3 somewhat shorter, exceeding pedicel or either club segment. Jaw with truncation at base of tooth no. 2. Three ring-joints. Petiole pale brown, longer than wide, segment 2 a fourth the surface, longest. Dayboro, forest. To a right-minded army general. China.

9. *Elasmus semiatripes*. From voltairei: Femur 3 all aeneus, 2 with ~~crosses~~ ~~crosses~~ ~~crosses~~ ~~crosses~~, 1 aeneus at base (from my modern synopsis). palmwoods, forest.

10. *Cphelesia horatii*. From viridithorax: Sides, venter of thorax yellow; antennae yellow except club; prothorax yellow; hind tibiae purple. Queensland.

11. *Quadrastichodella boudiennyi* N. n. for nova Girault, 1929, p. 329-330, preocc. Dedicated to another Right warrior many wrong ones common recently, before and now.

12. *Tetrastichus flavicollis*. From culex: Besides head, the pronotum yellow, so legs except coxae 2 and 3. First funicle cup-shaped. Window, Indoceopilly.

13. *Ootetrastichella anna*. From decii: Stylus green, only half length of ovipositor; coxa 3 all green; third funicle segment shortest. Pentland, forest.

14. *Boudiennyia saintpierrei* Gir. Genotype from Coctonus: marginal vein elongate. Dedicated to a hero.

15. *Chalcis judaei*. From anna: Hind femur with black distal area; dorsal abdomen black, except red apices of segments nos. 3, 4; black of tibiae replaced by red. To the still persecuted Jews. Central Queensland out of Entometa.

16. *Cephalocapsidea stali*. Miridae Phylinae. Last two antennae equal; mesonotum present at base of scutellum

femur 3 compressed. Pseudarctia small, coalesced, claws simple. Red with yellow dorsal lines notably on the meson of the scutellum and along veins and hemelytra, outer corners of scutellum, hind margin of pronotum also yellow, sc legs and ventro-lateral line of abdomen. Antennae 3-4 dark. Membrane smoky, two parallel, very convex cross-bands. Eyes bulging. No collar, mesonotum distinct, scutellum acute at apex. Head, thorax glabrous, sparsely pubescent caudad. Hemelytra pilose. Legs spinose. Large areola much longer than wide, Sandgate, Apr. 20, 1931, W. J. S. Sloan.

Cynipidae.

17. *Amblynotus berlesei*. BLACK, the wings clear, the antennae, legs, abdomen red-brown. Head, thorax pilose, cheeks behind the bare eyes striate; furrows sharp, straight, 2/3 from caudad, similar median sulcus. Scutellum coarsely punctate, propodeon subrugulose, with a wide median area; abdomen 2 about 1/2 of 3 which is well past middle; funicle segments 1-2 exceeding pedicel, twice longer than wide, rest gradually shortening to square, club (13) equal 2. Cubital vein a "bud" distad, wings short-fringed, ciliate. Male the same but funicle, club segments longer, pedicel shorter. Pairs, galls on Eucalyptus, Narrogin, W. Australia. To a fellow systemist.

Mendae.

Genus *Japania* dedicated to coming Japanese democracy. These pamphlets: 1925, p. 2, No. 3, dedication to ideal; 1928, p. 4, Froudeana, Eulophinae; August 29, 1936, p. 2, Correction, line 5, read 25, p. 4, line 5, Euplectrus is Euplectrus, line 9, Duotrastis IS correct.
