Instructor: Professor Tae-Hwy Lee, office: SPR 3103, office hours: MF 2–3 pm or by appointment on MWF
LEC: MW 11:40 am –1:00 pm, SPR 2206
TA: Ms. Hao Xu, office: SPR 3122, office hours: R 2–4 pm
DIS: R 12:40–1:30 pm, SPR 2206

**Goal:** This course covers the econometric methods for economic time series data. It provides a foundation for applied research using time series data. The goal is to acquire knowledge necessary to understand the applied and theoretical econometric literature as exposed in the leading journals.

**Course Outline:** The course deals with univariate and multivariate, stationary and non-stationary, time series methods. The course contains two parts. The first concerns the standard theory of stationary stochastic processes. The second part concerns the analysis of nonstationary data. We take a close look at the asymptotic distribution theory in the leading case of an AR(1) model and especially the case with an autoregressive unit root. We discuss the characterization, estimation and tests in cointegrated systems and ARCH models. Lecture notes will be available in iLearn. The corresponding material in Hamilton (1994) as indicated below will be covered. Hamilton Chapters 3, 4, 5, 6, 10, 11, 15, 16, 17, 21, will be closely followed. Hamilton Chapters 18, 19, 20, will be supplemented by original publications (references below).

Lecture 1: Properties of Stationary ARMA Processes (Hamilton Chapters 3, 4, 6)
Lecture 2: Forecasting with Stationary ARMA Models (Hamilton Chapter 4)
Lecture 3: Estimation of Stationary ARMA Models (Hamilton Chapter 5)
Lecture 4: Multivariate Time Series Processes and VAR (Hamilton Chapters 10, 11)
Lecture 5: Models of Nonstationary Time Series (Hamilton Chapter 15)
Lecture 6: Trends (Hamilton Chapter 16)
Lecture 7: Unit Roots (Hamilton Chapter 17)
Lecture 8: Spurious Regression (Hamilton Chapter 18)
Lecture 9: Cointegration (Hamilton Chapters 19, 20)
Lecture 10: ARCH (Hamilton Chapter 21)

**Grading:** Attendance in all LEC/DIS is required (needless to say). All exams are mandatory and no make-up exams will be given. The following schedule may be subject to change with a short notice. The final exam is comprehensive. Students are responsible for any announcement and information provided during LEC/DIS.

- Assignments 20% many, weekly
- Midterm 30% 5/4/2016 Wednesday, 11:40 am – 1:00 pm
- Final Exam 50% 6/8/2016 Wednesday, 10:00 am – 1:00 pm

**The academic integrity procedures for graduate students:** Academic integrity violations involving graduate students are reviewed and processed by the Graduate Division. Examples of academic integrity violations include plagiarism, cheating, unauthorized collaboration, etc. The Student Conduct Office does not administrate these instances for graduate students, only undergraduates. Information, policies and procedures regarding academic integrity for graduate students and the form required to report a violation can be found [here](#). There is also a direct link under the Faculty and Staff section of the Graduate Division website.
